

# ANTI CRYSTALLIZATION

## Product Description:

### ANTI-CRYSTALLIZATION

Suitable for treating all types of AdBlue, preventing the formation of crystals and scale in the SCR (Selective Catalytic Reduction) system.

### COMPOSITION

It is a chemical solution formulated with surfactants, dispersants and detergent molecules that affect the surface tension of the fluid, promoting the permanent and homogeneous emulsion of its components.

### ADVANTAGES

- Prevents clogging of injectors, SCR catalysts or other vulnerable system components and passages.
- Especially suitable for engines subjected to urban driving or stationary use: Short journeys, frequent stops en route, low rpm, idling, etc.
- It facilitates the complete transformation of urea, even at low temperatures, guaranteeing optimal system .
- Valid as a preservative to prolong the useful life of AdBlue® during storage.

### HOW TO USE

Add between 2 and 3ml per liter directly to the AdBlue® bottle or tank (never to the fuel tank).

- 10-15ml for 5 Liters
- 20-30ml for 10 Liters
- 40-60ml for 20 Liters
- 400-600ml for 200 Liters
- 2-3Liters for 1,000 Liters
