

CERAMIC TREATMENT

Product Description:

CERAMIC TREATMENT

Treatment for lubricants that contains a large quantity of ceramic particles, their size being only two microns and with the property of having six times less friction than the same oil. Said particles are found in a homogeneous and stable dispersion with either synthetic or mineral oil, forming a protective anti-friction film.

ADVANTAGE

- Reinforces the usual lubricant, achieving strong results.
- Thanks to its high ceramic content, it provides excellent protection for the engine and gearbox.
- Reduces wear up to 60%.
- Reduces oil consumption.
- Reduces fuel consumption.
- Eliminates engine, gear and transmission noise.

HOW TO USE

MOTOR:

Pour the product directly into the engine lubricant.
Recommended use every 20,000 km, regardless of oil change.
230 ml of **CERAMIC TREATMENT** treat 6 liters of oil.

CHANGE:

Only for manual gearbox.
Add the product to the gearbox valve.
Recommended use every 30,000 km.

230 ml of **CERAMIC TREATMENT** treat 2.5 liters of oil.

PRESENTATION

- 230 ml
